

PRESS RELEASE

SENOKO ENERGY ACHIEVES 1,000 DAYS WITHOUT LOST TIME INJURY

Latest operating milestone reflects holistic safety programme involving staff and contractors

Singapore, 7 July 2010 – Senoko Energy Pte Ltd today announced that it has achieved 1,000 days – equivalent to 4.2 million manhours – without incurring a lost time injury (LTI) – the latest safety milestone reached by the company.

The landmark achievement, accomplished through the efforts of the company's staff and contractors, comes five weeks after Senoko Energy clocked 4 million manhours – equivalent to 956 days – without a LTI on 24 May.

Mr Brendan Wauters, President & CEO of Senoko Energy, thanked all Senoko staff and contractors for their contribution to Senoko Energy's safety record.

“Senoko Energy is proud to have reached this significant milestone. Safety is one of the core values of our Company and reaching this milestone is testament to our efforts to permeate all levels of staff and all contractors with our primary focus on safety.”

The milestone achieved today reflects the holistic safety programme that Senoko Energy, a leading player in the power generation industry, has implemented while producing competitively priced electricity for Singapore's needs.

This holistic safety programme applies to both staff and contractors. Initiatives such as the Senoko President & CEO Award, as well as regular safety inspections, are held to encourage staff to generate ideas to improve workplace safety. Senoko Energy also conducts safety-related courses regularly to keep staff updated on workplace safety competencies and requirements.

Mr Wauters added: “We are proud of our safety record to date, but safety is of course a continuous process. The consistency of the effort is crucial. We will continue to seek ways to improve our safety standards and to target excellence in the area of workplace safety.”

Senoko staff and contractors gathered today at the Senoko Safety Exhibition 2010, held at Senoko Power Station, to celebrate the latest safety milestone. Themed “Hazards@Work”, staff and guests viewed exhibits on common hazards around the power station and participated in activities relating to safety practices.

Glossary

Lost time injury – a workplace accident which results in the injury of an employee or contractor in the course of work who is given more than one day of medical or hospitalisation leave.
